

Background

Inflammation is often a sign of the immune system protecting the host from infection or injury. Careful control of inflammatory pathways is crucial to the immune system not causing harm to the body. The new Q-Plex NHP Anti-Inflammatory Panel 1 (7-Plex) provides reliable and sensitive data to accelerate your research.

Q-PlexTM plates are built by adsorbing seven distinct capture antibodies in a defined array to the bottom of each well. Using only 25 μ L of sample per well, up to 80 samples can be assayed for all seven markers in the panel within 4 hours.
