Background

The Q-Plex™ Human Cytokine HS (4-Plex) is a fully quantitative multiplexed ELISA kit for researchers looking to measure low concentrations of human cytokines. These chemiluminescent assays allow for the concurrent measurement of IFN γ , IL-4, IL-6, and IL-10.

The high sensitivity (HS) kits contain a 96-well plate and the optimized reagents required to perform testing. Each well of the included plate features a defined array of unique capture antibodies for each marker in the panel. Requiring only 25 μ L, Q-Plex kits provide an efficient means of generating an accurate cytokine profile for each sample.
